Your Quick Guide to Cloud Technology

The term "cloud" is simply a metaphor for the Internet. Cloud technology is just technology that uses the Internet to store files, data and programs rather than storing them locally on your computer's hard drive or internal servers. This brings a host of benefits for your team and business!

cloudsource technologies

How Cloud Can Benefit Your Business

Secure & Reliable

Reduced On-Going Maintenance

Increased storage

Cost Savings

Enhanced Network Performance

And overall a HUGE reduction in costs for your business!

Improve Collaboration

Scalable & Flexible

70% of businesses report that they've been able to **reinvest funds back into their business** *as a result of moving to the cloud*

59% of SMBs using cloud services
report significant productivity benefits

Recovery times for SMB's are **4X faster** compared to those *not* utilising cloud services

94% of SMB's have **security benefits** in the cloud that they *didn't have with their on-premise service*

Move to the Cloud

Migrating to the Cloud is easy but to ensure a seamless transition it's important to make sure you're properly prepared. This will mean the least disruption and the best solution for your requirements. We have devised a simple three-step plan to help your business get ready for Cloud:

1 *Audit*
Conduct a full audit of your existing communications environment including the tools, physical equipment and network infrastructure. Can they cope with the additional demands of cloud?

2 *Identify*
Map out the processes carried out by your staff across different areas of the business, including collaboration internally and with external stakeholders and customers. Identify the challenges your business may be facing as a whole, as well as issues affecting specific individuals throughout the business such as roaming staff and Front of House / Reception. What tools could help you to overcome these problem areas? How could your processes be improved?

3 *Educate*
Make sure that all staff and stakeholders are prepared for the move and how it may affect them. It's important that everyone understands and is on board with the benefits and that you provide training specific to each department and / or user. It's also key to keep customers in the loop so that they're aware of the changes and how this will benefit them.

Cloud backup from £49.99

Microsoft Office from £55 per user*

Cloud Servers from £74.99 per month

Why Choose Cloudsource?

We dedicate time to talking with our customers about their business set up and needs. Once we understand these we can then design the best cloud-based or hybrid solution. If a complete cloud solution is simply not right for your business we can advise on a blended approach to suit your needs. We offer a range of cloud-based services including:

Business Telephony

Managed Service Provider

IT Solutions

Mobile

Utilities

IP Surveillance

Advertising on Hold

Cloud Media

All these solutions with one simply monthly bill and with 0% finance available for all customers!

It's so easy to migrate your business to the cloud and we're here to help guide you through the process. Speak to one of our team of experts about how we can save you money, improve your efficiency and future-proof your business with Cloud.
